## BACKGROUND CHARACTERISTICS OF STATE CASE OPENINGS TO PAROLE SUPERVISION DURING 1973

Division of Research and Planning

This report describes the background characteristics of individuals serving state prison sentences who were released to parole supervision during 1973. It is designed to serve as a reference document to use in planning and for responding to information requests. Two comparison reports, also describing state case openings during 1973, present information on parole-related factors (region, release conditions, supervision conditions, etc.) and on date-related factors (time incarcerated, time to serve on parole, etc.).

Several points about the tables should be explicitly mentioned:
The data is grouped according to the regional office to which the
parolees were assigned upon release; this will enable field staff
to examine the background characteristics of state case openings
for their region. The column labelled "Other" includes state
parolees for whom no region was initially assigned as well as
state parolees released to out-of-state supervision. In tables
where the data was "unknown" for certain individuals, percentages
were calculated on the basis of the known total.

The specific tables included in the report are as follows:
