Characteristics of Those who enter the Department of Rehabilitation and Correction (DRC) with an Expected Stay of Less than One Year: A Report Based on 2007 Admissions

Context: Ohio has a sentencing structure that allows judges to sentence felons to the prison system for terms as short as six months, and there are sentences at the Felony 5, 4, and 3 levels that can be one year or less. Given that most offenders spend at least a few days in jail, and that time is reduced from the time to be spent in prison, which means almost all sentences of one year or less will spend less than 12 months in prison. As will be noted below, most years at least three fifths of those sent to prison will spend less than 12 months in prison, and many will spend only a few months. This pattern allows Ohio to reserve most of its prison capacity for more serious offenders, who typically spend many years in prison. A profile of average time served for Ohio inmates released from prison during 2007 can be found at http://www.drc.state.oh.us/web/reports/reports15.asp.

<u>Those Released in Less Than 12 Months:</u> Two databases were used for this summary. First, all felons committed to DRC from common pleas courts during CY 2007 are summarized in a commitment database. That database is used to produce the overall commitment report, detailed at http://www.drc.state.oh.us/web/reports/reports12.asp, on all 28,178 admissions. That database has a variable that records the likely completion date of the prison term. Those in the commitment database with a completion date of less than 12 months after admission were selected (N=16,063; 57% of admissions) and summarized in several tables, below.

Unfortunately, the overall commitment database does not have many detailed variables about each offender. Thus, we turned to a second database for which a detailed social, offense, and criminal history was collected and coded. That "sample" was for over 3500 consecutive admissions between May and June 2007, and it seems to be fully representative of the larger population. For that sample also those expected to spend less than one year were extracted and described in the tables below. This was 52% of the sample. A full detailing of the 2007 Intake sample is available on DRC's website at http://www.drc.state.oh.us/web/reports/reports18.asp.

Commitment Database Tables: These tables are attached as Tables A – G. Table A shows that 35% of the short term offenders are in for drug possession or trafficking of small amounts. Most of the other ten most frequent offenses are property offenses. Still it is useful to note that some of these offenders have committed violent crimes. Table B sorts the offenders by felony level, with 84% F4 or F5. Table C shows expected time to serve. Over 12% of those serving less than a year will be out in less than three months. Another 41% will spend three, four, or five months, for a total of 53% of the one year or less offenders spending less than six months. This is almost 8500 inmates. Table D shows a county distribution; no total seems completely out of line with overall commitment patterns. Table E shows race/ethnicity commitment patterns consistent with all admissions, but there are slightly more females in the less than one year group (Table F) than in all admissions. Age patterns also are consistent with overall intake (Table G). Thus, overall, these offenders are similar to all inmates with the exception of having shorter terms, less serious crimes (specifically drugs and property), and offenses with lower felony levels.

Intake Sample Database Tables: These tables are attached as Tables 1-14. Certain tables can be compared between the Commitment and Intake Databases. Gender (Table 1), Race/Ethnicity (Table 2), and County of Commitment (Table 9) show great consistency between the two databases. So does Table 10 – Offenses; the seven most frequent offenses are in the same order, with percentages for the first four within one percentage point between the two tables. There is a fairly close ordering between the next several offenses. All this suggests that for the less than one year offender the social and criminal profile of the intake sample is probably reasonable for all less than one year commitments. There are 3931 offenders in the sample of whom 2038 were for less than one year; for the remaining tables, some cases of the 2038 were excluded due to missing information.

Intake Sample Social History: Almost 43% of the intake sample did not have a high school degree on entering prison (Table 3). Table 4 shows that only a quarter had been full time employed at the time of arrest for the committing offense. Table 5 notes that 31% had some history of mental illness or treatment. Of the sample, 93% had a documented history of drug abuse or admitted to the same (Table 6), while fewer had problems with alcohol as shown in Table 7, but still almost 71%. Only 31% of the sample had completed substance abuse treatment (Table 8). With regard to all these variables, there are no meaningful differences from the full Intake sample; a slight exception is that two or three more percentage points of the "less than one year" portion of the sample had a history of drug abuse and also had been to substance abuse treatment.

<u>Intake Sample Criminal History:</u> Although the instant offenses of these short sentence offenders are not very serious, this does not mean that all are easy to divert. Many have at least two prior felonies, 28% (Table 11), and slightly over half, 52%; have had prior imprisonments (Table 13). Just over a quarter (27%) had prior violent felony convictions (Table 12). These distributions are very similar for both the short term offenders and the full intake sample. Further, Table 14 illustrates that 36% were on probation/community control at the time they committed additional behavior for which they were sent to prison. This is five percentage points higher than the whole intake population. Another six percent were on parole or post-release control from prison when they committed a new felony that resulted in a new prison term.

<u>Summary:</u> In many ways the inmates entering prison with short terms are remarkably similar to the full range of inmates coming to prison. Demographics – sex, ethnicity, age, county of commitment – and social history – education, employment, substance abuse, treatment—are all very similar between the two groups. Differences relate to the kinds of offenses for which the short term inmates enter prison, which are predominately, but not exclusively, drug and property offenses, the term lengths of admission, and a five percentage point higher likelihood that the short term offender entered for a probation violation.

DATA TABLES FOR SENTENCES OF LESS THAN ONE YEAR N = 16063 (CY2007 COMMITMENTS)

Table A: MOST FREQUENT CRIMES

(ranked in order of frequency)

Top Ten Offenses	Frequency	Percent
Drug Possession	3799	23.7
Trafficking in Drugs	1712	10.7
Theft	1565	9.7
Receiving Stolen Property	1076	6.7
